

Binance A to Z Full Course

Account security se spot trading, charts, risk management, Earn, Alpha aur Futures tak - step by step, bina hype ke.

Beginner to disciplined trader

Notebook-style visual guide • Screen maps, real demo screenshots, checklists, quizzes aur 30-day plan

Edition: 27
September 2026

Course ka maqsad: profit chase nahin, skill build karna

Binance master karna sirf buttons ya coin names yaad karna nahin. Asal mastery ka matlab hai: paisa bhejne se pehle network samajhna, order se pehle risk likhna, aur hype ke waqt bhi plan follow karna.

Is course ke baad aap

- ✓ Wallets aur trading pairs samjhenge
- ✓ Account ko properly secure karenge
- ✓ P2P safely use karna jaanenge
- ✓ Spot order types laga sakenge
- ✓ Chart aur basic indicators parh sakenge
- ✓ Trade ka risk calculate karenge
- ✓ Futures ka danger samjhenge

Ye course kya promise nahin karta

- ✗ Guaranteed profit
- ✗ Har signal ka sahi hona
- ✗ Ek raat mein rich hona
- ✗ Alpha coin ka future listing pakka hona
- ✗ Loss-free strategy
- ✗ Copy trader ya bot ki guarantee

Important: Crypto high-risk hai. Sirf woh paisa use karein jo lose hone par rent, food, bills ya emergency par asar na dale. Aapka current balance zero hai, is liye pehla phase bilkul free practice hai.

Mastery ke 4 levels

Level 1 - Safety

Security, wallets, network, P2P

Level 2 - Spot

Pairs, orders, charts, research

Level 3 - Discipline

Risk, journal, repeatable plan

Level 4 - Advanced

Earn, Alpha, Futures, bots, API

Is sequence ko follow karein - shortcut mat lein

01 Crypto aur Binance basics

02 Account security

03 Wallets aur fund flow

04 Deposit, withdrawal, networks

05 P2P buying aur selling

06 Spot market interface

07 Market aur limit orders

08 Stop-limit aur OCO

09 Candlesticks aur market structure

10 Support, resistance aur volume

11 MA/EMA aur RSI

12 Fundamental analysis

13 Tokenomics aur liquidity

14 Risk aur position sizing

15 DCA aur spot strategies

16 Fees aur net profit

17 Simple Earn aur Launchpool

18 Binance Alpha aur Web3

19 Margin aur Futures

20 Bots, copy trading aur API

21 Scams aur red flags

22 30-day practice plan

23 Trading journal

24 Final exam aur glossary

Golden sequence: Learn -> Observe -> Paper trade -> Mock trade -> Tiny spot trade -> Review.
Futures sirf tab jab kam az kam 50 documented practice trades aur consistent rules hon.

Har lesson ka tareeqa

Example

›

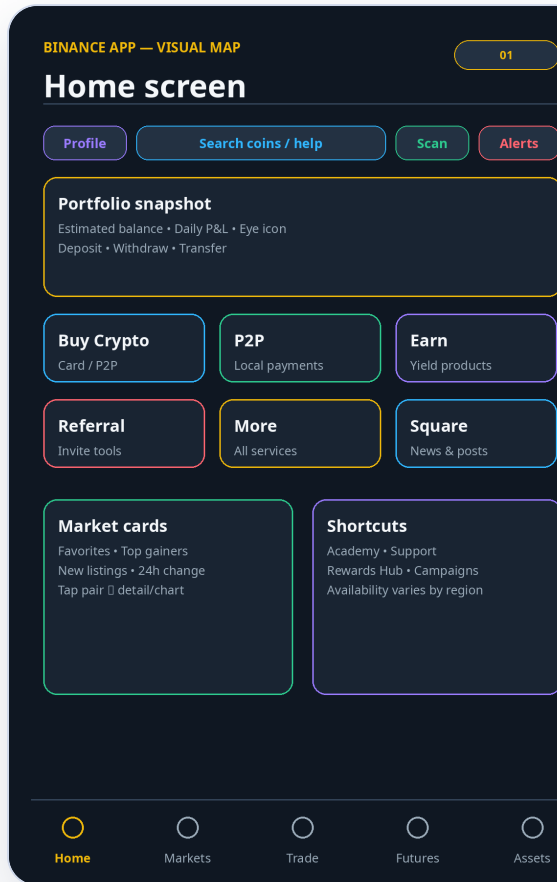

Checklist

›

Practice

App menus region aur version ke mutabiq thore different ho sakte hain. Kisi feature ko use karne se pehle app mein current availability, fee, limits aur terms zaroor dekhein.

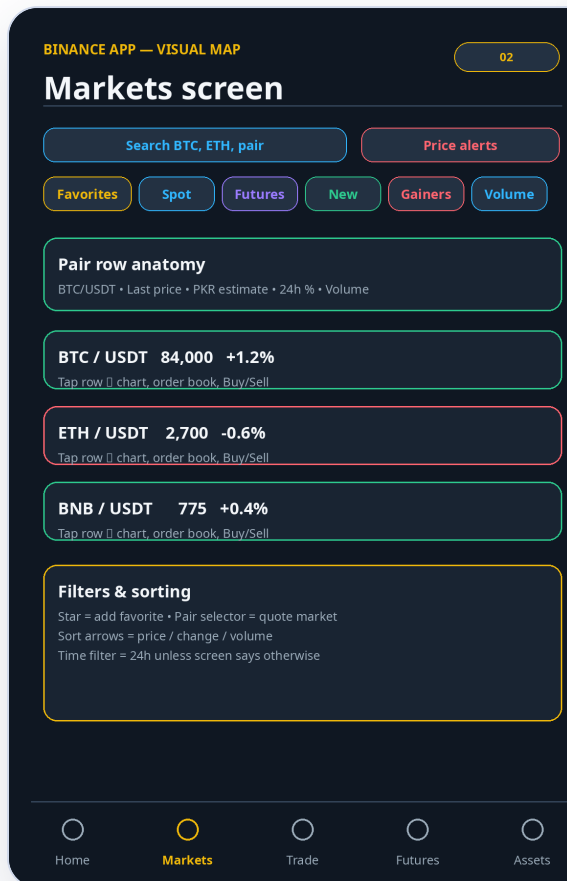

Home screen: har shortcut ka kaam

Concept map: app version aur region ke mutabiq arrangement badal sakta hai.

- 1 **Profile:** Identification, security, payment methods, preferences aur support.
- 2 **Search:** Coin, pair, product ya help article dhoondein. Similar ticker ko double-check karein.
- 3 **Scan:** Binance QR/payment ya supported address scan. Unknown QR ko approve na karein.
- 4 **Alerts:** Price, order aur security notifications. Notification ko app ke andar verify karein.
- 5 **Portfolio snapshot:** Estimated balance aur daily P&L; eye icon amount hide karta hai.
- 6 **Buy Crypto:** Region ke mutabiq card, P2P ya third-party route. Total fee/rate compare karein.
- 7 **P2P:** Local payment ke sath user-to-user orders; escrow sirf active order mein.
- 8 **Earn:** Flexible/locked reward products; APR guaranteed profit nahin.
- 9 **Square:** Community posts/news; content ko financial advice na samjhein.
- 10 **More:** Saari services ki directory. Kuch options region/account eligibility par depend karte hain.
- 11 **Bottom bar:** Home, Markets, Trade, Futures aur Assets ke darmiyaan navigation.

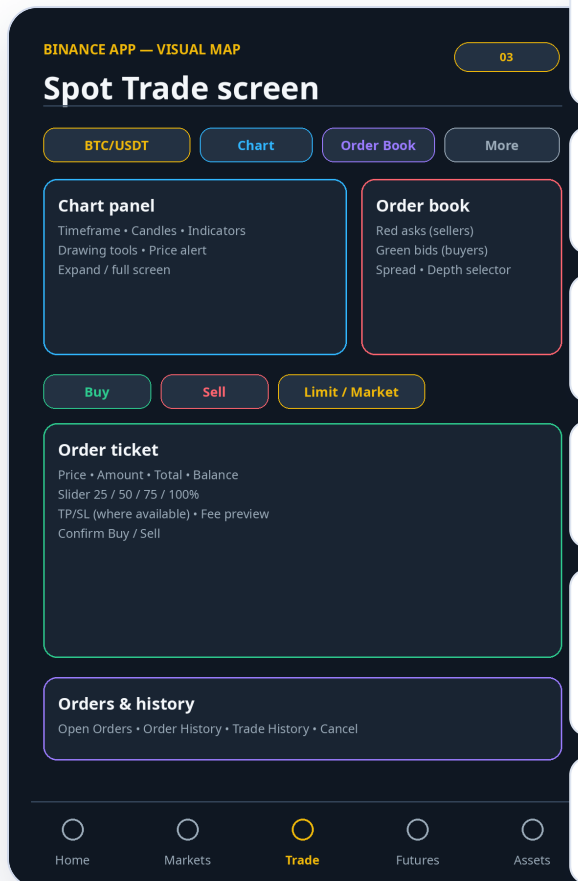

Markets screen: coin dhoondhna aur compare karna

Price aur percentage examples sirf screen anatomy samjhane ke liye hain, live quote nahin.

- 1 **Search:** Exact ticker/pair likhein, jaise BTC/USDT. Fake look-alike naam se bachein.
- 2 **Favorites:** Star kiye huay pairs ki private watchlist.
- 3 **Spot:** Direct asset market. Quote market USDT, USDC, BTC waghera ho sakta hai.
- 4 **Futures:** Derivative contracts. Spot balance ya ownership jaisa nahin.
- 5 **New:** Nayi listings/discovery. Naya hona quality ya profit ki guarantee nahin.
- 6 **Gainers:** Selected period ke top percentage movers; pump chase ka risk high.
- 7 **Volume:** Traded quantity/value. High volume liquidity ka clue hai, safety guarantee nahin.
- 8 **Pair row:** Symbol, last price, fiat estimate, 24h change aur volume.
- 9 **Sort:** Price/change/volume columns ko ascending ya descending karein.
- 10 **Price alert:** Target level par notification; automatic buy/sell nahin.

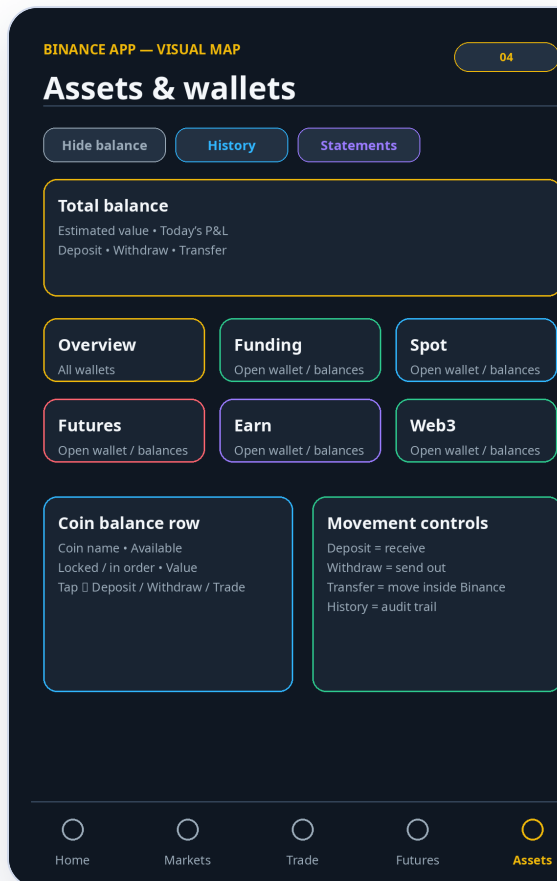

Spot Trade screen: chart se order history tak

Concept map: confirm dabane se pehle pair, side, price, amount aur fee dobara parhein.

- 1 **Pair selector:** Base/quote market choose karta hai. BTC/USDT aur BTC/USDC alag books hain.
- 2 **Chart:** Timeframe, candles, indicators aur drawing tools. Ek candle prediction nahin.
- 3 **Order book:** Red asks sellers; green bids buyers. Darmiyan spread hota hai.
- 4 **Buy / Sell:** Spot mein Buy asset leta, Sell held asset deta hai.
- 5 **Order type:** Market immediate; Limit chosen price; Stop-limit trigger + limit; OCO linked exits.
- 6 **Price:** Per-unit quote. Market order mein editable price nahin hota.
- 7 **Amount / Total:** Base quantity ya quote spend. Units ko confuse na karein.
- 8 **Slider:** Available balance ka percentage; 100% use karna zaroori nahin.
- 9 **TP/SL:** Take-profit aur stop-loss levels, feature/order ke mutabiq.
- 10 **Open Orders:** Pending orders. History fill/cancel record dikhati hai.

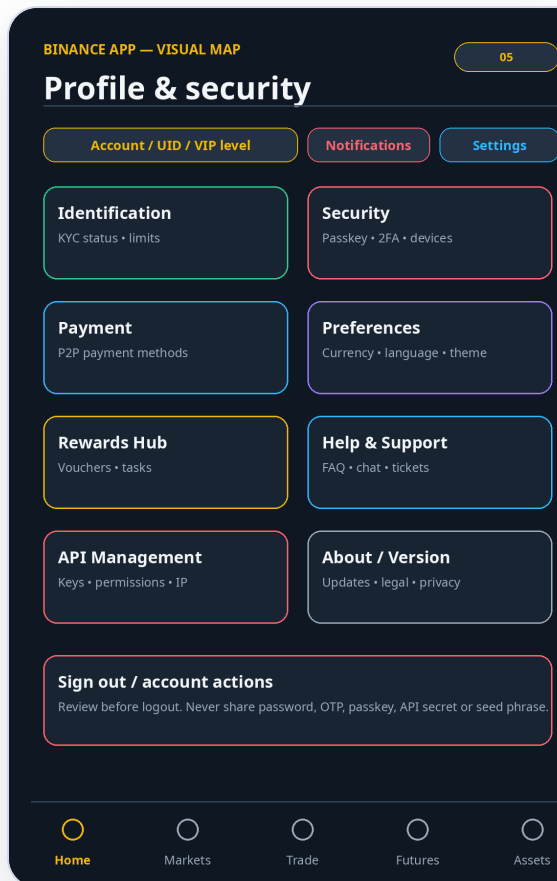

Assets screen: balance kahan pada hai?

Deposit receive karta hai; Withdraw external send; Transfer Binance ke andar wallet move.

- 1 **Overview:** Account wallets ka combined estimate.
- 2 **Funding:** P2P/payment activity ka wallet.
- 3 **Spot:** Spot holdings aur order balance.
- 4 **Futures:** Derivative margin; liquidation exposure ko alag samjhein.
- 5 **Earn:** Subscribed product balances aur rewards.
- 6 **Web3:** On-chain wallet/dApps; approvals aur seed security critical.
- 7 **Deposit:** Coin + network + address/memo generate. Sender ka network exact match.
- 8 **Withdraw:** External address ko send. Address, network, fee, memo aur amount verify.
- 9 **Transfer:** Funding se Spot ya Spot se Futures jaisi internal move.
- 10 **History:** Deposits, withdrawals, transfers aur status ka audit trail.

Profile & Settings: account ka control room

Security menu names version ke saath shift ho sakte hain; meaning yehi rahega.

- 1 **Identification:** KYC status, verification level aur limits.
- 2 **Security:** Passkey/2FA, anti-phishing, devices, activity aur withdrawal controls.
- 3 **Payment:** P2P payment methods; sirf apne verified accounts use karein.
- 4 **Preferences:** Language, fiat display, theme aur notification choices.
- 5 **Rewards Hub:** Vouchers/tasks; expiry aur conditions check karein.
- 6 **Support:** Official FAQ/chat/tickets. Social-media DM ko support na samjhein.
- 7 **API Management:** Advanced automation. Minimum permissions, IP restriction, no withdrawal.
- 8 **Notifications:** Security alerts ko on rakhein; promotional noise alag manage karein.
- 9 **Version/About:** App update, legal notices aur privacy details.
- 10 **Logout/account action:** Shared device par sign out; unknown sessions Security se remove.

Crypto basics: pehle zubaan samjhein

Crypto asset blockchain par record hota hai. Binance ek centralized exchange hai: trading interface aur account custody platform manage karta hai.

Coin vs token

Coin apni blockchain ka native asset hota hai, jaise BTC ya ETH. **Token** kisi existing chain par issue hota hai.

Stablecoin

USDT/USDC jaise assets dollar ke qareeb value maintain karne ki koshish karte hain. Peg tootne, issuer aur platform ka risk phir bhi hota hai.

Blockchain

Distributed ledger jahan transactions network rules ke mutabiq verify hoti hain. Final transfer aam tor par reverse nahin hota.

Exchange custody

Exchange wallet mein private keys platform control karta hai. Convenience milti hai, lekin platform aur account-security risk rehta hai.

Trading pair ko decode karein

$BTC / USDT = 84,000$

BTC **base asset** hai aur USDT **quote asset**. Iska matlab 1 BTC ki quoted value 84,000 USDT hai. Buy mein aap USDT de kar BTC lete hain; sell mein BTC de kar USDT.

Low-price trap: Rs 1 ka coin zaroori nahin "sasta" ho. Unit price ke saath market cap, supply aur liquidity dekhein.

Quick check: ETH/USDT mein base asset konsa hai? Jawab: ETH.

Account security: trade se pehle fortress

Password leak ho sakta hai; multiple security layers attacker ko rokne ka chance barhati hain.

- 1 Unique password**
Binance ke liye alag, long password rakhein. Kisi aur site par reuse na karein.
- 2 Authenticator ya passkey**
Authenticator SMS se SIM-swap risk kam karta hai; passkey phishing-resistant option ho sakta hai.
- 3 Anti-phishing code**
Official Binance emails mein aapka chosen code nazar aana chahiye.
- 4 Device review**
Security > Device and Activities mein unknown device/session remove karein.
- 5 Withdrawal controls**
Address whitelist/withdrawal security available ho to enable karein; new address ko pehle test karein.
- 6 Email bhi secure**
Email par strong password aur 2FA; recovery options updated rakhein.

Kabhi share na karein

- ✗ Password
- ✗ 2FA/OTP code
- ✗ API secret
- ✗ Seed phrase/private key
- ✗ Screen-sharing control

Safe routine

- ✓ Saved official bookmark
- ✓ Login alerts check
- ✓ Withdrawal confirmation read
- ✓ Unknown app permissions remove
- ✓ Software update

Rule: "Binance Support" ban kar jo banda password, OTP, seed phrase ya remote access maange, us se baat band karein.

Wallets: paisa kis pocket mein hai?

Binance account ke andar alag wallets/products ka balance ek hi jagah nazar aa sakta hai, lekin har wallet ka kaam mukhtalif hai.

Wallet	Kaam	Yaad rakhein
Spot	Coin hold aur spot trade	Most basic trading wallet
Funding	P2P aur payment features	P2P ke baad transfer lag sakta hai
Earn	Subscribed earning products	Redemption terms check karein
Futures	Derivative margin	Liquidation risk
Web3 wallet	On-chain apps/tokens	Smart-contract aur self-custody risk

Internal transfer

Internal wallet transfer aam tor par blockchain withdrawal nahin hota; bas Binance account ke andar balance location badalti hai.

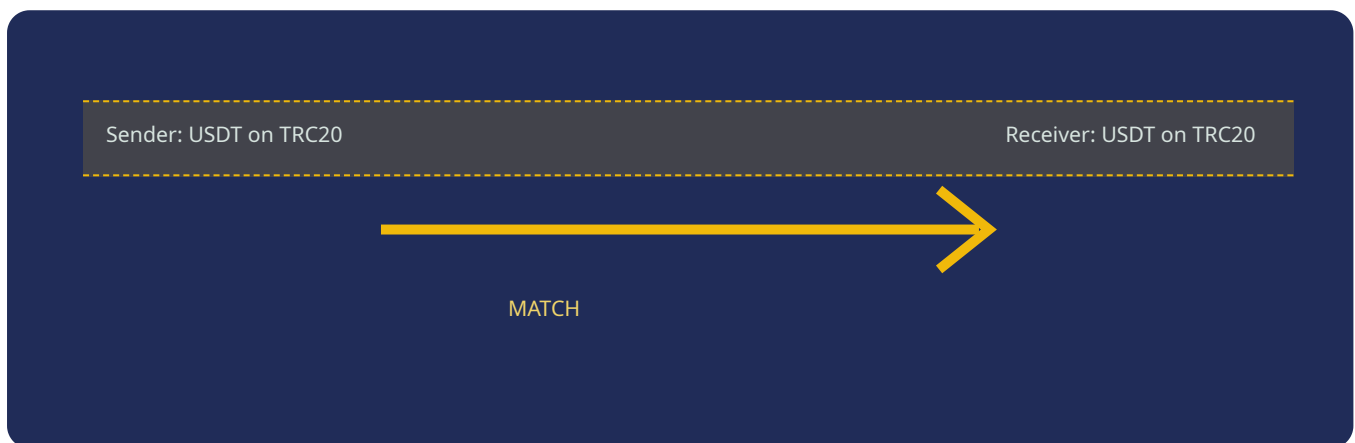

Check: Agar P2P se USDT li aur Spot order mein zero balance dikha, Assets > Transfer mein Funding se Spot select karein.

Custodial vs non-custodial

Custodial: platform keys manage karta hai. **Non-custodial:** aap seed/private key control karte hain, aur loss/recovery ki zimmedari bhi aapki hoti hai.

Crypto transfer: network mismatch sab se mehngi ghalti

Withdrawal mein coin, destination address, network aur agar required ho to memo/tag - sab exact match karne chahiye.

Safe transfer checklist

- ✓ Coin same
- ✓ Network same
- ✓ Address full verify
- ✓ Memo/tag if shown
- ✓ Fee and minimum check
- ✓ Small test first

Never do this

- ✗ Sirf cheapest network choose
- ✗ Old screenshot address copy
- ✗ Memo ignore
- ✗ Unknown person ka address
- ✗ Whole amount first time send

Official warning: Binance ke mutabiq selected network destination platform ke network se match na kare to funds lose ho sakte hain aur recovery possible nahin bhi ho sakti.

Test transfer rule

Pehle smallest allowed amount bhejin. Destination par credit confirm hone ke baad remaining amount bhejin. Fees do martaba lagen gi, magar bari ghalti se bachne ka cost hai.

P2P: escrow samjho, payment verify karo

Peer-to-peer (P2P) mein aap doosre user se local payment method ke zariye crypto buy/sell karte hain. Binance active order ke dauran seller ka crypto escrow mein lock karta hai.

Offer choose ›

Order active ›

Payment ›

Crypto release

Buy karte waqt

1. Merchant ka completion rate, orders, limits aur terms dekhein.
2. Payment sirf active order ke listed account par karein.
3. Payment ke baad app mein "Transferred/Notify Seller" tabhi dabayein.
4. Crypto release ka wait karein; issue par order ke andar Appeal use karein.

Sell karte waqt

1. Screenshot ya SMS ko payment proof na samjhein.
2. Apni bank/wallet app khol kar balance aur transaction verify karein.
3. Sender name, amount aur order details match karein.
4. Actual funds milne ke baad hi crypto release karein.

Hard stop: Order cancel/expire ho chuka ho to payment na bhejein. Escrow protection khatam ho sakti hai. WhatsApp/Telegram par deal shift na karein.

Scenario: Buyer screenshot bhejta hai magar bank balance update nahin. Action? Crypto release nahin; order chat mein wait/appeal.

Spot market: asset aap own karte hain

Spot trade fill hone par underlying crypto aapke Spot wallet mein aata hai. Borrowing ya leverage na ho to liquidation risk nahin hota, lekin price loss ho sakta hai.

Order book

Buy bids aur sell asks ki live list. Best bid buyer ka highest current price; best ask seller ka lowest current price.

Spread

Best ask minus best bid. Low liquidity mein spread barh sakta hai aur market order mehnga fill ho sakta hai.

24h volume

Pair mein kitni trading hui. Higher volume aam tor par better liquidity dikhata hai, guarantee nahin.

Slippage

Expected aur actual fill price ka farq. Fast market ya bari order mein barh sakta hai.

Spot screen reading order

- 1 Pair aur correct market confirm karein.
- 2 Current price, 24h high/low aur volume dekhein.
- 3 Timeframe select karein; chart context samjhein.
- 4 Order type, price, quantity aur fee check karein.
- 5 Open Orders aur Order History verify karein.

Beginner rule: Convert simple hai, Spot zyada control deta hai. Learning ke liye Spot interface samjhein; fast market mein market order se slippage ho sakta hai.

Order types: execution ko control karein

Order	Kab use hota hai	Main risk
Market	Abhi best available price par	Slippage
Limit	Apni set price ya better	Fill na ho
Stop-limit	Trigger ke baad limit order	Fast move mein skip
OCO	Target aur protection together	Wrong levels

Example: limit buy

BTC current price 84,000 USDT hai. Aap 81,000 par buy karna chahte hain. Limit buy 81,000 set karein. Price wahan na aaye to order open rahega.

Example: market buy

Aap 20 USDT ka BTC foran lena chahte hain. Market order liquidity se fill hoga; final average 84,000 se thora different ho sakta hai.

Maker

Aisa order jo order book mein liquidity add karta hai, aksar unfilled limit order.

Taker

Aisa order jo available liquidity ko foran match karta hai, aam tor par market order.

Before confirm: Buy/Sell side, pair, price, quantity, total aur estimated fee ko aik dafa zuban se parh kar confirm karein.

Question: Aap current se neeche price par buy karna chahte hain aur wait kar sakte hain. Market ya limit? Jawab: Limit.

Stop-loss aur OCO: plan ko order mein badlein

Stop-loss prediction nahin; woh aapka pehle se tay kiya hua exit hai jab trade idea invalid ho jaye.

Stop-limit ke do numbers

Stop / trigger

Jis price par limit order activate hota hai.

Limit

Activate hone ke baad minimum/maximum execution price.

Long exit example: Stop 95.0 | Limit 94.5

Agar price 95 ko touch kare, 94.5 ka sell limit order place hoga. Bohat tez crash mein price 94.5 se neeche jump kare to order unfilled reh sakta hai.

OCO - One Cancels the Other

Ek target sell aur ek protective stop ko pair karta hai. Ek execute ho to doosra cancel ho jata hai.

Entry 100

>

TP 110

|

SL 95

Common mistake: Stop ko random 1% ya 5% par na lagayein. Pehle chart invalidation level dekhein, phir us distance ke mutabiq position size calculate karein.

Practice: Demo mein ek limit buy aur us ke baad OCO exit bana kar open orders screen samjhein. Real balance use nahin karna.

Candlesticks: price ki short story

Har candle selected timeframe mein open, high, low aur close (OHLC) dikhati hai.

Green candle

Close open se upar. Body move dikhati hai; upper/lower wick rejected prices dikhati hain.

Red candle

Close open se neeche. Bari body momentum dikhati hai, magar context ke baghair signal nahin.

Timeframe context

1-minute candle noise zyada, daily candle broader structure dikhati hai. Entry se pehle higher timeframe (4H/1D) ka trend aur phir lower timeframe ka setup dekhein.

HH

Higher high

HL

Higher low

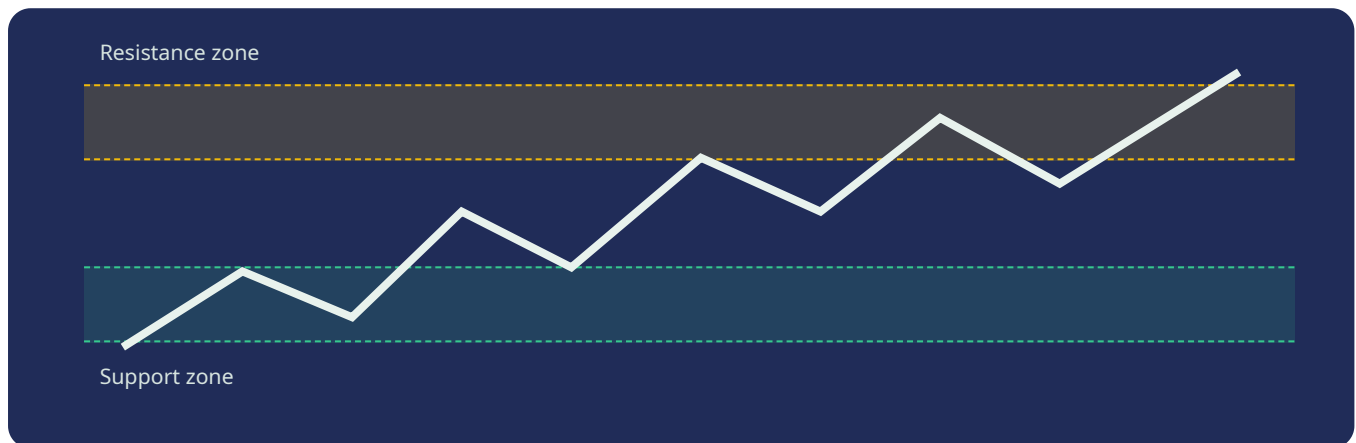

Trend

HH + HL

Rule: Ek candle ka naam ya pattern akela trade signal nahin. Location, volume, trend aur risk level ke saath dekhein.

Support, resistance aur volume

Levels exact line se zyada zones hote hain. Support par buyers active ho sakte hain; resistance par sellers. Breakout tab meaningful hota hai jab close aur volume confirmation mile.

Breakout

Price zone ke bahar close kare. Higher volume aur successful retest confidence barha sakta hai.

Fakeout

Price briefly level cross kare magar wapas range mein close ho. Chase karne walay trap ho sakte hain.

Volume kya batata hai?

- Price up + volume up: move ko participation support kar sakti hai.
- Price up + volume down: momentum weak ho sakta hai.
- High volume at level: buyers/sellers ka strong battle.
- Volume guarantee nahin; sirf evidence ka ek hissa.

Practice: BTC/USDT 4H chart par last 3 swing highs/lows mark karein. Lines ko zone banayein, phir dekhein price ne close kahan diya.

Indicators: confirmation, crystal ball nahin

SMA / EMA

Moving average price ko smooth karta hai. EMA recent data ko zyada weight deta hai aur jaldi react karta hai.

- Price above MA: bullish bias ho sakta hai
- Price below MA: bearish bias ho sakta hai
- Sideways market mein false signals

RSI

Relative Strength Index momentum oscillator hai, aam tor par 0-100.

- 70+ traditionally overbought
- 30- traditionally oversold
- 50 line trend bias mein useful

Critical: RSI 70 ka matlab automatic sell aur 30 ka automatic buy nahin. Strong trend mein RSI lambi dair extreme reh sakta hai.

Simple confirmation stack

1D trend

›

4H zone

›

Volume

›

RSI/EMA

Indicator ko price structure ke baad dekhein. Agar structure aur indicator disagree karen to trade skip karna bhi decision hai.

Quick check: EMA price ke zyada qareeb aur fast react karta hai ya SMA? Aam tor par EMA.

Indicator overload se bachain

5 indicators jo ek hi price data se bante hain, 5 independent confirmations nahin. Beginner ke liye structure + volume + ek trend tool + ek momentum tool kafi hai.

Fundamental analysis: coin ke peeche business case

Chart entry timing de sakta hai; fundamentals batate hain ke aap kis cheez mein risk le rahe hain.

Problem & utility

Project kis real problem ko solve karta hai?
Token ka actual use kya hai? Token ke baghair product chal sakta hai?

Team & execution

Team public/credible hai? Code, product, partnerships aur roadmap measurable hain?

Users & revenue

Active users, fees/revenue aur retention genuine hain ya sirf incentives se?

Competition

Alternative projects kya hain? Moat, liquidity aur developer ecosystem kaisa hai?

Tokenomics

Supply, unlocks, allocation, emissions, burn aur holder concentration check karein.

Risk events

Regulation, hacks, admin keys, bridge risk, delisting, lawsuits ya exploit history?

DYOR source ladder

Official docs

On-chain data

Audit/code

Independent research

Social media rule: Influencer ka “100x gem” claim research nahin. Paid promotion, referral incentive aur old data check karein.

Tokenomics: cheap coin ka illusion todo

$$\text{Market cap} = \text{Price} \times \text{Circulating supply}$$

$$\text{FDV} = \text{Price} \times \text{Maximum/fully diluted supply}$$

Market cap current circulating value ka rough measure hai. Fully Diluted Valuation (FDV) future full supply ko current price par value karta hai.

Metric	Sawal	Risk signal
Circulating supply	Abhi kitna market mein?	Low float
Total/max supply	Kitna exist/ever exist?	Huge future dilution
Unlocks	Team/investor tokens kab?	Large near-term unlock
Allocation	Team/VC/community share?	High concentration
Liquidity	Order book depth?	Wide spread/slippage

Example

Coin A price \$0.01 aur circulating supply 100 billion ho to market cap \$1 billion. Coin B price \$100 aur supply 1 million ho to market cap \$100 million. Unit price chhota hone se Coin A cheaper nahin.

Low-float trap: Chhota circulating supply price ko aasani se pump kar sakta hai; later unlocks selling pressure la sakte hain.

Practice: Kisi bhi Alpha coin ke liye circulating %, next unlock date, top holders aur daily volume note karein. Agar data unclear ho, trade skip.

Risk management: survival pehle, profit baad

Achi analysis bhi galat ho sakti hai. Risk system आपको ek ghalat trade se account destroy hone se bachata hai.

1%

Training risk per trade

2R

Example reward target

0

Revenge trades

Position size formula

$$\text{Position size} = \text{Rupee risk} \div \text{Stop distance \%}$$

Example: Capital Rs 20,000. Risk 1% = Rs 200. Entry se stop 4% door. Position size = $200 \div 0.04 = \text{Rs } 5,000$. Agar stop hit ho, expected loss fees/slippage se pehle takreeban Rs 200.

R-multiple

1R आपका planned risk hai. Agar Rs 200 risk karke Rs 400 profit target ho to reward:risk = 2:1, yani +2R target. Rs 200 loss = -1R.

Trade se pehle

- ✓ Entry
- ✓ Invalidation/stop
- ✓ Target
- ✓ Position size
- ✓ Reason

Skip karein agar

- ✗ Stop define nahin
- ✗ FOMO
- ✗ Loan/emergency money
- ✗ Illiquid pair
- ✗ News unclear

Loss limit: Do planned losses ke baad us din stop. Market ko recover karne ki jaldi revenge trading ban jati hai.

Beginner strategies: simple rules, repeatable process

1. Dollar-cost averaging (DCA)

Fixed amount ko fixed schedule par buy karna. Timing pressure kam hota hai, magar asset selection aur long-term downside risk khatam nahin hota.

2. Trend pullback

Higher highs/higher lows wale trend mein support ya moving-average area tak pullback ka wait; confirmation ke baad entry, structure ke neeche stop.

3. Breakout and retest

Resistance ke upar close aur volume; phir broken level ka successful retest. Breakout candle chase na karein.

Strategy	Best for	Avoid when
DCA	Long horizon	Weak/unresearched asset
Pullback	Clear trend	Choppy range
Breakout	Strong level/volume	Thin liquidity

No strategy: "Coin 30% up hai, abhi buy karo." Pump chase entry plan nahin. Move miss ho gaya to next setup ka wait karein.

One setup rule

30 din sirf ek setup observe karein. Har chart par alag strategy use karenge to pata nahin chalega kis rule ne kaam kiya.

Assignment: BTC/USDT ya ETH/USDT par 10 historical examples screenshot/notes mein mark karein: entry, stop, target aur result in R.

Fees aur profit: net number hi real hai

Entry aur exit dono par trading cost ho sakti hai. Market spread, slippage, withdrawal fee aur Futures funding bhi result ko change karte hain.

$$\text{Net P\&L} = \text{Gross P\&L} - \text{All fees} - \text{Funding} - \text{Slippage}$$

Cost	Kahan	Control
Trading fee	Buy/sell execution	Current fee page check
Spread	Bid vs ask	Liquid pairs
Slippage	Fast/low-depth market	Limit order/smaller size
Withdrawal	On-chain transfer	Compatible network
Funding	Perpetual Futures	Rate/time monitor

Example

Rs 10,000 position 3% up = Rs 300 gross. Agar round-trip fees, spread aur slippage total Rs 45 hain to net profit Rs 255. Chhoti repeated trades mein costs edge kha sakti hain.

Fee rates change: Pair, region, VIP level, promotion aur BNB fee payment ke mutabiq rate different ho sakta hai. Order confirm screen aur official fee page ko current source samjhein.

Performance tracking

Win rate akela kafi nahin. 40% wins ke saath 2R average win aur 1R loss profitable ho sakta hai; 80% wins ke saath occasional -10R disaster account ko nuksan de sakta hai.

Simple Earn aur Launchpool: yield free money nahin

Simple Earn Flexible

Assets subscribe karke variable rewards. Redemption usually flexible, lekin limits/delays aur extreme-event risk ho sakta hai.

Locked Products

Term ke liye assets commit hote hain. Rate aur early-redemption conditions product page par check karein.

Launchpool

Designated assets lock karke new-token rewards mil sakte hain. Allocation aapke share ke mutabiq hoti hai.

HODLer Airdrops

Eligible BNB holding/subscription snapshots se rewards mil sakte hain; current rules aur eligibility change ho sakti hai.

APR ko samjhein

Annual Percentage Rate yearly rate hoti hai, daily guaranteed cash amount nahin. Promotional/tiered APR sirf limited amount par apply ho sakti hai aur change ho sakti hai.

Double risk: Aap coin mein 10% reward kama sakte hain, lekin coin price 40% gir jaye to PKR value phir bhi loss mein hogi.

Subscribe se pehle

- ✓ Reward kis coin mein?
- ✓ APR fixed ya variable?
- ✓ Redemption kab aur kis limit ke saath?
- ✓ Principal/value kis risk mein?
- ✓ Kya ye paisa jaldi chahiye ho sakta hai?

Binance Alpha aur Web3: early ka matlab safe nahin

Binance Alpha early-stage on-chain projects discover/trade karne ka area hai. Alpha par nazar aana future Binance Spot listing ki guarantee nahin.

Possible appeal

- ✓ Early project discovery
- ✓ On-chain market access
- ✓ Occasional campaigns/airdrops
- ✓ Fast-moving narratives

Higher risks

- ✗ Extreme volatility
- ✗ Thin liquidity/slippage
- ✗ Smart-contract risk
- ✗ Fake token/contract
- ✗ No spot listing guarantee

Alpha due-diligence checklist

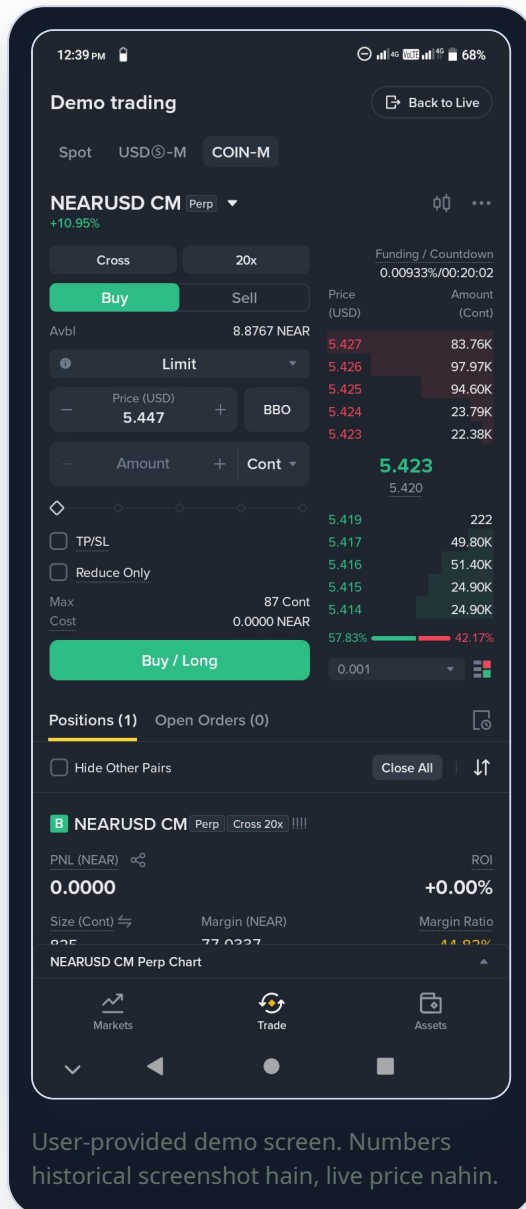

1. Official project contract address verify karein.
2. Circulating supply, FDV aur unlock schedule dekhein.
3. Top holder concentration aur liquidity check karein.
4. Audit sirf signal hai, guarantee nahin.
5. Small test amount aur predefined maximum loss.

Correction: Alpha ko "Binance ka approved future listing" na samjhein. Selection visibility deta hai; listing, value ya safety ka promise nahin.

Web3 wallet rule

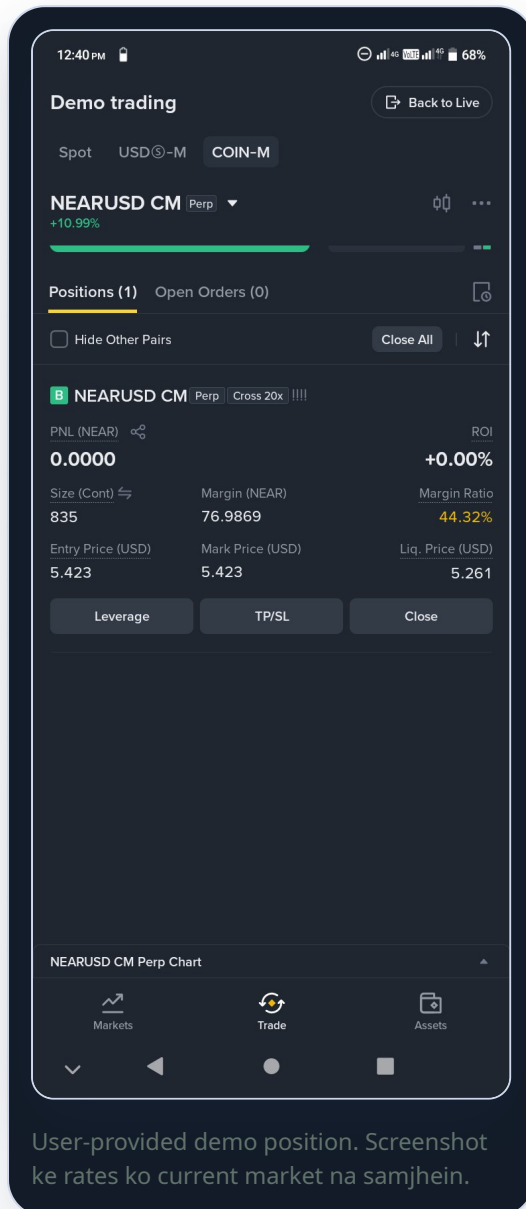

Seed phrase/private key kisi support agent ko kabhi na dein. Unknown dApp approval se wallet drain ho sakta hai; permissions review/revoke karein.

COIN-M order ticket: har visible option

- 1 **Demo trading / Back to Live:** Fake funds aur real account ke darmiyan boundary. Live par wapas ja kar order na lagayein jab tak irada clear ho.
- 2 **Spot / USDⓈ-M / COIN-M:** Spot asset; USDⓈ-M stablecoin-settled Futures; COIN-M crypto-settled Futures.
- 3 **NEARUSD CM Perp:** COIN-M perpetual contract; expiry nahin. Percentage selected period ka move.
- 4 **Cross / 20x:** Margin mode aur leverage. Cross wallet funds expose kar sakta hai; 20x bohat high risk.
- 5 **Funding / Countdown:** Agli periodic funding tak waqt aur rate.
- 6 **Buy / Sell:** Buy/Long rise ka position; Sell/Short fall ka position.
- 7 **Avbl:** Is wallet/contract ke liye available collateral.
- 8 **Limit / Price / BBO:** Order type, chosen price aur best bid/offer shortcut.
- 9 **Amount (Cont):** Contracts ki quantity - coin quantity nahin samjhein.
- 10 **TP/SL:** Attached take-profit/stop-loss. Trigger basis bhi verify karein.
- 11 **Reduce Only:** Existing position ko sirf reduce/close; nayi opposite position open nahin.
- 12 **Order book:** Red asks, green bids, amount/depth aur buy/sell share display.

Open Position card: liquidation se pehle kya parhein

- 1 Positions / Open Orders:** Filled exposure aur pending instructions alag.
- 2 Hide Other Pairs:** Sirf selected pair ki positions filter.
- 3 Close All:** Multiple positions exit kar sakta hai; confirmation aur order type parhein.
- 4 B + Cross 20x:** Long side, cross mode, 20x leverage.
- 5 PNL:** Current profit/loss settlement asset mein. Unrealized PNL exit tak change hota rehta hai.
- 6 ROI:** Margin par return percentage; leverage ki wajah se dramatic lag sakta hai.
- 7 Size (Cont):** Position contracts. Contract specification dekhe baghair coin value assume na karein.
- 8 Margin:** Position ko support karne wala collateral.
- 9 Margin Ratio:** Liquidation risk indicator; barhta ratio danger barhata hai.
- 10 Entry Price:** Position ka average entry.
- 11 Mark Price:** PNL/liquidation calculation ka reference; last price se different ho sakta hai.
- 12 Liq. Price:** Estimated forced-close level. Fees/rules aur market conditions matter.
- 13 Leverage / TP-SL / Close:** Risk setting, exits aur manual close controls.

Screenshot lesson: Entry 5.423 aur liquidation 5.261 ka gap sirf takreeban 3% hai. 20x leverage par chhota adverse move bhi position destroy kar sakta hai.

Margin aur Futures: leverage loss ko bhi multiply karta hai

Margin mein borrowed funds use hote hain. Futures mein aap derivative contract trade karte hain; long se rise aur short se fall par speculate kar sakte hain.

Leverage

Rs 10,000 margin par 10x leverage se Rs 100,000 notional exposure. 1% market move roughly 10% margin impact kar sakta hai, fees/funding se pehle.

Liquidation

Margin required level se neeche aaye to exchange position force-close kar sakta hai. Exact price leverage, margin mode aur maintenance rules par depend karti hai.

Isolated margin

Assigned margin tak risk ko separate rakhne ki koshish. Position phir bhi liquidate ho sakti hai.

Cross margin

Available balance multiple positions ko support kar sakta hai; ek bad trade zyada wallet funds expose kar sakta hai.

Funding rate

Perpetual Futures mein longs aur shorts ke darmiyan periodic payment hoti hai taa ke contract price spot ke qareeb rahe. Positive funding mein aam tor par longs shorts ko pay karte hain; negative mein ulta.

Beginner restriction: Real Futures tab tak nahin jab tak 50 Mock trades, written rules, position sizing aur stop execution consistently follow na ho. High leverage avoid karein.

Free practice: Futures > Menu/Profile > Mock Trading. Virtual balance use karein; live aur demo ko clearly distinguish karein.

Options, bots, copy trading aur API

Tool	Kya karta hai	Hidden risk
Options	Right to buy/sell contract	Expiry, premium, volatility
Grid bot	Range mein repeated orders	Trend breaks range
DCA bot	Rules par staged entries	Bad asset averages down
Copy trading	Trader positions copy	Track record can change
API	Software account access	Key theft/over-permission

Automation ka sach

Bot strategy ko automate karta hai; profitable strategy create nahin karta. Backtest overfit ho sakta hai, market regime badal sakti hai, aur fees repeated orders ko hurt karti hain.

API security

- ✓ API secret ko password samjhein.
- ✓ Minimum permission only.
- ✓ Withdraw permission kabhi enable na karein jab zaroorat na ho.
- ✓ IP whitelist available ho to use karein.
- ✓ Unknown third-party bot ko key na dein.
- ✓ Regular review aur revoke/rotate.

Copy trading: Past return future result guarantee nahin. Max drawdown, leverage, trade duration aur worst month dekhein - sirf ROI screenshot nahin.

Scam radar: in signals par foran ruk jao

Message red flags

- ✗ Guaranteed daily profit
- ✗ "Abhi warna chance gaya"
- ✗ Fake support DM
- ✗ Recovery fee first
- ✗ OTP/seed/API secret request
- ✗ Screen share/install app

Trading red flags

- ✗ Unknown coin sudden pump
- ✗ No liquidity
- ✗ Influencer referral push
- ✗ Fake P&L screenshot
- ✗ Withdrawal blocked story
- ✗ Off-platform P2P

Pause protocol

- 1 Message/link par click na karein.
- 2 Official app/bookmark se account open karein.
- 3 Anti-phishing code aur sender details check karein.
- 4 Security activity, orders aur withdrawals review karein.
- 5 Issue ho to official Binance support inside app use karein.

If compromised: Unknown devices/API keys revoke karein, password change karein, account protection steps follow karein. Kisi stranger ko "recovery" ke liye aur paisa na bhejin.

Golden question: "Agar ye opportunity kal tak available na rahe, kya mujhe phir bhi samajh aa raha hai ke paisa kaise banta hai?" Agar nahin, skip.

Balance 0 ho to bhi aaj se training shuru

Real capital na hona learning ke liye faida ho sakta hai: FOMO ke baghair process build hota hai.

Free tasks

- ✓ Security checkup complete
- ✓ 10 pairs watchlist
- ✓ Daily chart screenshot
- ✓ Support/resistance mark
- ✓ Paper orders record
- ✓ Futures Mock Trading
- ✓ Academy lessons/quizzes

Abhi avoid

- ✗ Loan le kar deposit
- ✗ Emergency money
- ✗ Paid signal groups
- ✗ Referral ke liye churn
- ✗ Alpha points ke liye forced volume
- ✗ Borrowed leverage

Paper trade example

Assume virtual capital Rs 10,000. Entry 100, stop 96, risk Rs 100. Stop distance 4%, position Rs 2,500. Target 108 = 2R. Chart par result record karein, real order nahin.

Goal: 30 paper + 20 Mock trades, rules followed $\geq 90\%$

Skill metric: Profit se pehle "rule-follow rate" track karein. Lucky win with broken rules failure hai; planned loss with correct execution success hai.

Real balance kab?

Jab security complete ho, network test samajh aa gaya ho, journal consistent ho aur woh amount available ho jo full lose hone par daily life affect na kare. Pehli real activity tiny Spot se; Futures nahin.

Har din 30-45 minute: theory se routine tak

Days	Focus	Output
1-3	Security + menus	Security checklist
4-6	Wallets + networks	3 transfer scenarios
7-9	P2P safety	5 scam responses
10-12	Spot + order types	10 paper orders
13-15	Candles + structure	10 marked charts
16-18	Levels + volume	5 setup plans
19-20	EMA + RSI	Indicator notes
21-22	Fundamentals	2 coin reports
23-24	Risk math	10 size calculations
25-27	Mock Trading	20 demo trades
28	Earn/Alpha review	Risk comparison
29	Final exam	80% target
30	Personal rulebook	One-page plan

Daily routine: 5 min news/calendar, 10 min higher timeframe, 10 min setup marking, 10 min paper/mock execution, 5 min journal. Trade na milna normal hai.

Graduation rule

Kam az kam 50 documented trades, average result positive after fees, maximum loss rule respected, aur revenge/FOMO entries zero. Phir bhi real capital tiny se start.

Har trade ko evidence mein badlein

Max drawdown

- ✓ Best setup kis condition mein chala?
- ✓ Loss analysis se tha ya broken rule se?
- ✓ Kis time/emotion par FOMO hua?
- ✓ Fees ne kitna result reduce kiya?
- ✓ Agla week sirf ek behavior change?

Professional habit: Journal ka goal apne aap ko prove karna nahin; apni repeatable edge aur repeated mistakes discover karna hai.

20 questions: mastery check

1. BTC/USDT mein quote asset?
2. Spot aur Futures ka main farq?
3. Market order ka main execution risk?
4. Limit order kab unfilled rehta hai?
5. Stop aur limit price ka farq?
6. Network mismatch ka result?
7. P2P seller kab crypto release kare?
8. Anti-phishing code kya karta hai?
9. Market cap formula?
10. FDV kya estimate karta hai?
11. RSI 70 automatic sell kyun nahin?
12. Higher high + higher low?
13. Fake breakout ka sign?
14. Position size formula?
15. 1R kya hai?
16. Funding rate kis product mein?
17. Alpha listing kya guarantee karti?
18. Bot risk kyun remove nahin karta?
19. API permission principle?
20. Real Futures se pehle kya?

Answer key

1 USDT. 2 Spot asset ownership; Futures derivative/leverage. 3 Slippage. 4 Market set price tak na aaye. 5 Stop trigger; limit execution boundary. 6 Funds lose/recovery issue. 7 Bank account mein actual receipt verify ke baad. 8 Official email identify. 9 Price $\times$ circulating supply. 10 Full supply at current price. 11 Trend mein extreme reh sakta hai. 12 Uptrend structure. 13 Level cross karke range mein wapas close. 14 Rupee risk $\div$ stop %. 15 Planned unit of risk. 16 Perpetual Futures. 17 Kuch guarantee nahin. 18 Bad rule bhi automate hota hai. 19 Minimum permissions. 20 Mock practice + journal.

Mera Binance safety aur trading plan

Security rules

- ✓ Unique password + 2FA/passkey
- ✓ Anti-phishing code
- ✓ No OTP/seed/API sharing
- ✓ Official app/bookmark only
- ✓ Unknown devices removed

Money rules

- ✓ No loan/emergency funds
- ✓ 1% training risk maximum
- ✓ Two losses = stop for day
- ✓ No averaging without plan
- ✓ Net P&L after costs

Trade rules

- ✓ Higher timeframe first
- ✓ Entry, stop, target written
- ✓ Position size calculated
- ✓ No pump chase
- ✓ Every trade journaled

Advanced-product rules

- ✗ No real Futures before 50 demos
- ✗ No high leverage
- ✗ No blind copy trading
- ✗ No unknown dApp approval
- ✗ No Alpha listing assumptions

Pre-trade 10-second check

Pair? Side? Price? Size? Stop? Fee? Network? Risk?

Agar in mein se aik bhi jawab unclear hai, confirm button nahin dabana.

Print/use: Is page ko screenshot karke phone mein rakhein. Trading ke waqt emotion barhta hai; written rules decision ko slow aur safer banate hain.

Core terms, seedhi zubaan mein

APR	Annual reward rate; change ho sakti hai.
Ask	Seller ka offered price.
Bid	Buyer ka offered price.
Blockchain	Distributed transaction ledger.
Collateral	Borrowed/leverage position ko support karne wala asset.
DCA	Fixed schedule par fixed amount buy.
Escrow	P2P order mein temporarily locked crypto.
FDV	Full supply ki current-price valuation.
Funding	Perpetual longs/shorts ki periodic payment.
Leverage	Small margin se larger exposure.
Limit order	Set price ya better par execution.
Liquidity	Price ko kam move kiye trade ki ability.
Long	Price rise se benefit ka position.
Market cap	Price × circulating supply.
Market order	Best available price par immediate order.

Core terms, seedhi zubaan mein

Notional	Leveraged position ki total exposure value.
OCO	Do linked orders; ek fill ho to doosra cancel.
Order book	Current bids aur asks ki list.
P2P	User-to-user fiat/crypto marketplace.
Perpetual	Expiry ke baghair Futures contract.
Private key	On-chain funds control karne ka secret.
RSI	0-100 momentum indicator.
Seed phrase	Wallet recovery words; kabhi share nahin.
Short	Price fall se benefit ka position.
Slippage	Expected aur actual fill ka farq.
Spot	Direct asset buy/sell with settlement.
Spread	Best ask minus best bid.
Stop-loss	Loss limit/idea invalidation exit.
Tokenomics	Token supply, allocation, utility, emissions.
Volatility	Price move ki speed aur size.

Final principle: Binance interface change hota rahega, lekin security, verification, risk sizing aur disciplined execution ke principles same rahenge.

Binance websites: kis page ka kya kaam?

Official pages ko bookmark se kholein. Search ads, clone domains aur DM links se login na karein.

Website area	Kaam aur beginner use
Main / Markets	Products, market overview, pair discovery. Price ko order screen aur pair name ke saath verify karein.
Spot Trade	Chart, order book, Buy/Sell ticket, open orders aur history.
P2P	Local payment offers. Active order, merchant stats, escrow, chat aur Appeal.
Earn	Simple Earn aur eligible reward products; APR, term, redemption aur asset risk read karein.
Launchpool	Eligible assets lock karke new-token allocation; rules/campaign dates change hoti hain.
Futures	USDⓈ-M/COIN-M derivatives, leverage, funding, liquidation aur Mock Trading.
Binance Wallet / Alpha	On-chain discovery/trading; contract, liquidity, approvals aur listing misconception check.
Academy	Free education: blockchain, trading, security aur glossary.
Support	FAQ, deposit/withdraw status, verification aur official support entry point.
Square	Community/news posts. User content verified research ka substitute nahin.
Research	Project reports aur market research; date aur methodology check karein.
API Docs	Developers/bots; beginner ko key banane ki zaroorat nahin jab tak exact use case na ho.

Phishing check: Password, OTP, passkey, seed phrase ya API secret kisi webpage/chat mein tab tak enter/share na karein jab tak destination official aur intended flow independently verify na ho.
